Tomorrow morning can I come up early at 7:40 and can you explain tonight's math HW because I don't understand it. If you can't it's fine I'm just getting here early and am incredibly confused.

Thanks

Hi there!

Yesterday's class wasn't the best, and I imagine a lot of people struggled on the homework. Unfortunately, I'm not in a position to offer extra help before school because that is the time I use to prepare for the daily lesson for all 6 classes. However, I'm ABSOLUTELY going to push back the upcoming quiz to address all questions/concerns that students have. Today will be a pretty lengthy homework review and then an alternative assignment on writing equations in $y = kx$ format. The original plan was to start a new lesson today - that's off the table until tomorrow because of the level of difficulty of last night's homework..

So, fear not, your confusion will be addressed today. I'm so glad you reached out and advocated for yourself, you will get the help you need; just not before the start of school today. :)
